

## D6.1 Interim report on the EXAG activities and outputs

This report outlines the background and membership of the Expert Advisory Group (EXAG), which has been established under Work Package 6, to ensure the relevance and usability of ROADMAP activities and outputs to regulators and HTA agencies throughout the project.

The EXAG has met three times during the first year of the project. At those meetings they have provided feedback and input on topics brought by three of the work packages – Work Package 2, 4 and 5. This has included feedback on draft outcome measures for Alzheimer’s disease (AD) and economic and disease modelling.

Over the remaining 12 months of the project, the EXAG will continue to meet, including potentially another two face-to-face meetings. A paper is also under development which aims to summarise key lessons learned through the EXAG discussions, as well as identifying steps for advancing the readiness of the regulatory and HTA environment.
